**Data interoperability &
quality**

**Data analytics &
insights**

We can help you in every step:

STEP 1

Is to make:

Assessment & analysis

We will understand what are your business goals and what is the current condition of your IT infrastructure.

STEP 2

Is to provide a:

Strategy

How to fill the gap between your current IT infrastructure and your business goals.

STEP 3

Is to build an:

Architecture & design

Based on the analysis, the strategy and the business goals. It include all necessary technical details.

STEP 4

Is to do the:

Implementation

Based on the previous steps we have clear timeline and technology solution. We are ready to make it real.

STEP 5

Is providing:

Support

For every additional request or need. Our support team have rating of 4.9 based on 1234 solved tickets and 543 reviews.

Our latest product:

Your hospital KPIs in a single dashboard

AI generated insights and forecasting

Forecasting

A forecast is a prediction made by analyzing historical data and patterns. With access to collected data, our software can predict future demands and trends to help hospitals make more accurate decisions.

Anomalies

We use historical data to set normal boundaries, and any value outside is an anomaly. A report displays all anomalies, allowing for early problem detection and harm reduction.

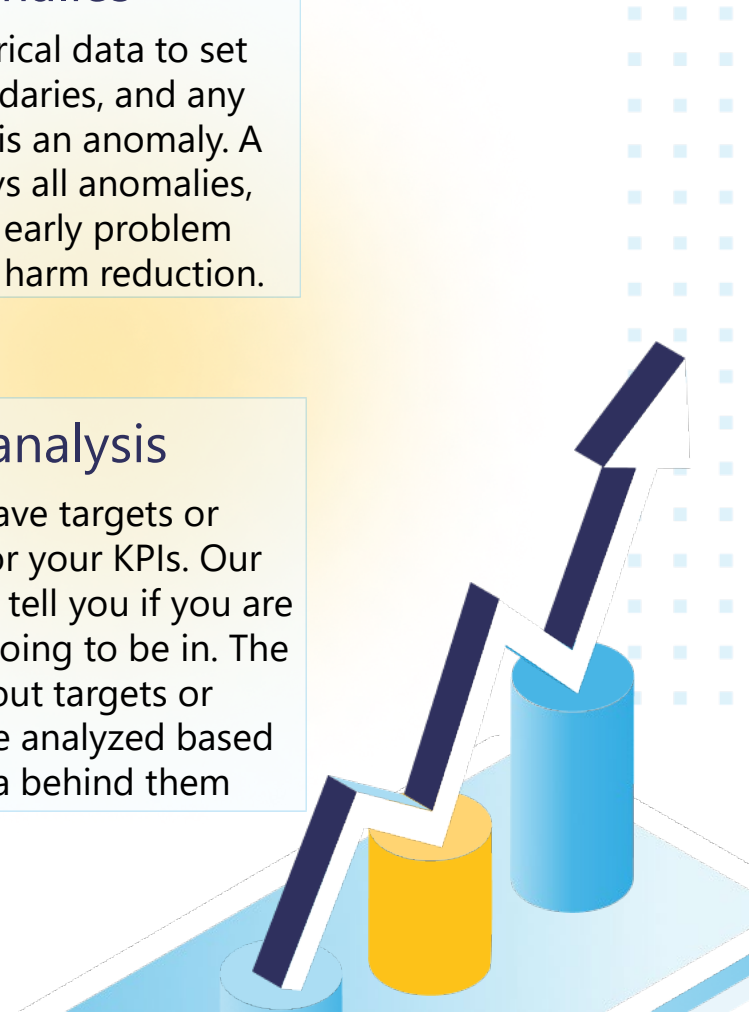

Trends

We find meaningful trends in your data, removing noises such as seasonality and outliers. You can see possible gains and pains before they happen.

KPIs analysis

You can have targets or thresholds for your KPIs. Our algorithms will tell you if you are in trouble or going to be in. The KPIs without targets or thresholds are analyzed based on the data behind them

With our tool you can measure

Healthcare finance KPIs

Optimize finances, identify risks, improve patient care.

Quality of Care KPIs

Enhance patient outcomes, satisfaction, and care quality.

Therapy efficiency

Maximize therapy effectiveness and efficiency for optimal patient outcomes.

Operations KPIs

Improve efficiency, quality, patient care with data-driven decisions.

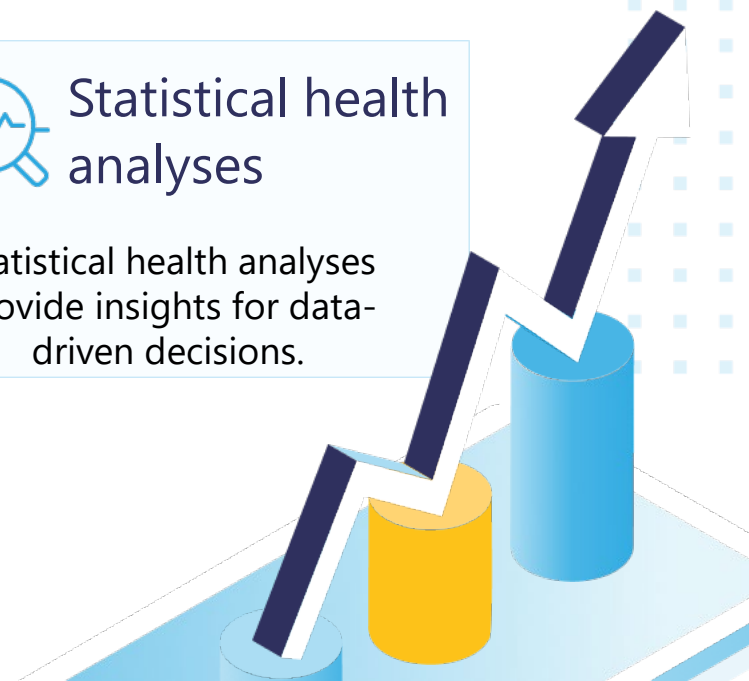

Patient Reported Experience

Improve patient satisfaction, care quality, and outcomes.

Statistical health analyses

Statistical health analyses provide insights for data-driven decisions.
